

## SKA: a physics machine for the 21st Century

**P. Diamond**

### ***SKA Organisation***

The Square Kilometre Array (SKA) will be, when complete, the largest scientific facility on Earth. It will consist of two radio telescopes on two continents covering the frequency range 70 MHz to 24 GHz. The science areas to be addressed with the SKA range from the study of gravity to exploring the Cosmic Dawn. I will provide an overview of the SKA and its broad science goals. I will discuss the current status of the design activities and the progress towards construction.
